Pollution Complaint/Report Form

Date 10-17-89

Report From:

- ☐ Citizen
☒ Fire Dept
☐ Sewer Maintenance
☐ Other

Received By: Gewe Pabst

Referred To:

Date of Incident: 10-16-89

Complainant Information:

Name Boatman's Bank
Address McDaniel & South
Phone
Directions (if needed)

Responsible Party Information:

Name Security Armour Services, Inc.
Address St. Louis, MO
Phone

Possible contamination of: ☐ soil ☐ groundwater

☒ surface water what body? Jordan Creek
☐ other

Other Pertinent Information

Diesel fuel leak from truck into storm box. Approximately 6-10 gallons.

Details of Incident:

I received a page from the Fire Dept. At approximately 5:30 P.M. (10-16-89) requesting assistance. I arrived at approximately 5:50 P.M. I was informed that Security Armour Services, Inc. had made a delivery to Boatman's Bank. One of its fuel tanks was overflowing. One of Boatman's Security Officers asked the Armoured Car to move but they did not. Consequently 6-10 gallons of diesel went into the storm box.

E.P.A. had received 2 complaints about the spill. EPA Report Nos. 1B261 & 1B265. Fire Marshal Kent Turner was there. He said he was going to contact Security Armour Services. I asked Mr. Turner to tell Security Armour Services to report the incident since E.P.A. had 2 complaints.

Action needed:

On 10-17-89 at 8:30 A.M. I contacted Mr. Ed Sears about the problem & he said he would call it in to Jefferson City.

No cleanup was possible.

December 7, 1984

Mary L. Frerking, Purchasing Officer
Boatmans National Bank
S.S. Station, Box 1157
Springfield, Missouri 65805

Dear Ms. Frerking:

This letter will confirm our conversation of November 30, 1984. This office received a complaint of a yellow liquid being discharged to Robberson Street north of McDaniel. Our investigation did confirm that cooling water from Boatmans National Bank was being discharged to the street.

We understand bank personnel were taking a cooling tower, located on the roof, out of service. Chemically treated cooling water and tower solids were discharged to the roof where it drained to the street.

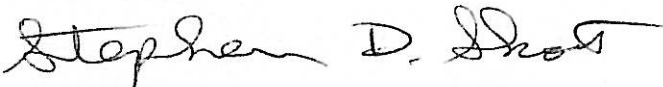

In most cases, the discharge of treated cooling water would not be acceptable for discharge to the Springfield storm sewers or waters of the state.

This office, the Missouri Conservation Department, and the Missouri Department of Natural Resources has spent many hours in the investigation of similar water pollution incidents in the Jordan Creek Valley.

Your elimination of this discharge to the storm sewer is advised. While your contractor is repairing the cooling tower, it may be prudent to make provisions for draining the tower water and solids to the sanitary sewer.

If you have any questions, please do not hesitate to contact this office.

Yours truly,

Stephen D. Short
Water Pollution Control Inspector II
